

Did you know?

What is UL EcoLogo?

A reliable way to identify environmentally preferable products.

Ecologo certification is an environmental certification program developed in Canada to identify environmentally friendly products and services.

It is managed by the independent UL (Underwriters Laboratories), which is an international product certification organization.

Ecologo certification aims to help consumers, businesses and government agencies identify and choose products and services that have a reduced environmental impact compared to their alternatives.

To obtain Ecologo certification, a product or service must meet a strict set of environmental criteria that take into account various factors, such as reducing greenhouse gas emissions, energy conservation, responsible management of natural resources, waste reduction, chemical safety, and other important environmental considerations.

Ecologo certified products can fall into a variety of categories, including cleaning products, construction products, household appliances, transportation services, and many others.

To validate that a product
is Ecologo certified:
